2. Jeff's server says I'm not authorized with http status 401 The WWW Authenticate header says that we need basic authentication, and provides a 'challenge' (Basic Realm). This is basically asking the client(browser) to provide the username and password.

*** not in the frame ***

The browser reads this and asks the user for the username and password. The user enters the info, and the client/browser reads the input and obtains the user info.

- Info on 401 Status code: <https://datatracker.ietf.org/doc/html/rfc7235#section-3.1>
- Info on WWW Authenticate : <https://datatracker.ietf.org/doc/html/rfc7235#section-4.1>

Frame 405:

- Client(browser) sends the request to get the info with the username and password encoded (user-pass). The user-pass is the user-id + ':' + the password¹. This user-pass is encoded in base-64.

See lines 01a0 and 01b0 in the hex below. We say that we are using basic authentication and provide the user-pass: Y3MzMzg6cGFzc3dvcmQ=. When decoded, this is “cs338:password”. This new information is found in the new header Authorization, in line 0190

6. My computer acknowledges the ok (frame 429)
7. My computer asks for favicon.ico (frame 430) GET /favicon.ico HTTP/1.1
 - a. Jeff's server says ok I got the request (frame 431)
 - b. Jeff's server says I don't have it (frame 432) HTTP/1.1 404 Not Found
8. Some things happen with a different ip that are not relevant (frames 440-453)

9. My computer asks for amateurs.txt, using the authorization header in lines 0160-0190 with the encoded user pass (username and password, Y3MzMzg6cGFzc3dvcmQ=, or “cs338:password”).
